

<b>Make the sessions page private, so it's not accessible unauthorised. (You don't need to implement the login)</b>	FEAT-01
<b>Functional Requirements</b> <ul style="list-style-type: none"> <li>- Please make the /sessions page private so it's not accessible unless the password `private-key` is used on the sign in screen</li> </ul> <b>Technical Requirements</b> <ul style="list-style-type: none"> <li>- The component `PrivateRoute` is already provided in the project, although we aren't sure if it works out of the box!</li> </ul>	

<b>Make the Frontend Client run on port 9331 for local development.</b>	BUG-02
<b>Context</b> <ul style="list-style-type: none"> <li>- To avoid clashing with other local clients which already run on port 8181 we need the Frontend Client to run locally on 9331.</li> </ul>	

<b>Hide publicly visible password from the sign in screen</b>	FEAT-03
<b>Functional Requirements</b> <ul style="list-style-type: none"> <li>- The password field should be concealed so when our users fill in their password it can't be seen by their physical neighbours when they look over their shoulder</li> </ul>	

<b>When authentication failed on the sign in screen an error should be shown</b>	BUG-04
<b>Functional Requirements</b> <ul style="list-style-type: none"> <li>- On the sign in screen when you fill in an incorrect password an error message should be shown. (This worked in the past but stopped working somewhere last month.)</li> <li>- The error message should be in a warning color and showing "The password you've filled in is incorrect"</li> </ul>	

<b>On the first page of sessions, the pagination doesn't show the active page number</b>	BUG-05
<b>Functional Requirements</b> <ul style="list-style-type: none"> <li>- When you navigate to the sessions overview, without interfering with the pagination, page 1 should be marked as active.</li> <li>- When you use the pagination navigating to other pages, it should also be active on the correct page</li> </ul>	

<b>Search for sessions</b>	FEAT-06
<b>Functional Requirements</b> <ul style="list-style-type: none"><li>- The sessions overview should be searchable. There is already a search bar in the UI, but that is not implemented yet.</li><li>- I want to be able to search for customer name, user name or user id</li></ul>	
<b>Sign out is broken!</b>	BUG-07
<b>Functional Requirements</b> <ul style="list-style-type: none"><li>- When I press on the Log out button I'm expecting to sign out and be redirected to the sign in screen, however this is not working.</li><li>- Some users have complained that they even couldn't find the sign out button.</li></ul>	
<b>Show the latest sign in on the dashboard</b>	FEAT-08
<b>Functional Requirements</b> <ul style="list-style-type: none"><li>- On the Dashboard page in the admin panel we would like to see which user has been signed in last.</li><li>- Show the user's name and the school they've signed into including with how long ago it happened.</li></ul>	
<b>Custom sorting sessions</b>	FEAT-09
<b>Functional Requirements</b> <ul style="list-style-type: none"><li>- When I visit the sessions overview I want to be able to set the sorting on the created date</li><li>- I want to be able to sort ascending or descending based on the created date</li></ul> <b>Technical Requirements</b> <ul style="list-style-type: none"><li>- Currently the sessions are sorted randomly based on how the API returns the data, this can't be changed.</li></ul>	
<b>Show more sessions in the overview</b>	BUG-10
<b>Functional Requirements</b> <ul style="list-style-type: none"><li>- Currently we only show 5 items per page, please update this to 20 so we can show more data on a page and don't need to browse as much.</li></ul>
